

On the **WATER** BOATING, FISHING

BARRY WISEMAN

A sound investment

A new book for the lay fisher is practical and clearly written as it explains how echo sounders work

AS A commercial fisherman, John Adams worked in Australia and the North Sea, out of Grimsby in Yorkshire. These days he runs the Fremantle Boat School and is a qualified marine trainer, working through the Australian Maritime Institute at Henderson.

"In the early days we used the old paper drum Koden sounders with an aircraft for back-up and a lookout in the rigging searching for 'prawn boils', where the prawns would congregate," he said. "We would run the echo sounder over the school to determine the likely catch before shooting our nets. Sounders are a passion of mine and I thought there was a need to help people learn how to interpret the screen in front of them."

How to Use an Echo Sounder/Fish Finder is printed by Scott Print in Perth and is an easy read. As a boater and keen fisherman, I found it addictive.

It is so informative and simple to understand, I could not put it down. At 100 pages, with many great genuine colour sonar-screen readings recorded by John himself, you can finish the book in days and go back to the beginning to re-process the information.

More than 20 years ago I bought an early black-and-white sounder and never really had success reading the bottom, other than knowing how much water was under the keel.

Ten years ago I upgraded to colour and new technology which helped me locate coral ledges and caves for the divers. However, I still did not know a lot about what the unit could do.

Earlier this year I was at a Perth Game Fishing Club open day when I came across Mr Adams' publication. Within minutes I was hooked and bought a copy, knowing I was going to upgrade to one of the latest echo sounders on

the market. His knowledge gave me more confidence in selecting which sonar unit to buy to meet my fishing requirements.

Mr Adams' aim was to keep it simple and give readers an understanding of how sounders work and the principles for detecting fish.

He's certainly done that. Colour screen examples detail various bottom and water column features and later pages feature readings that give the reader the opportunity to test themselves against the correct interpretations that are listed at the back of the book.

This section is confidence-boosting, helping the reader understand what's beneath the keel. It also explains how to use the zoom and bottom-lock features on your unit, depending on what you are targeting.

I met up with Mr Adams at the recent Mandurah Boat Show,

Screen shots of an echo sounder used for scanning the seabed for school fish.

where he was presenting a segment dealing with sonar equipment.

A copy of his book can now be found in the EK Harry Library at the International Game Fish Association Fishing Hall of Fame, in Florida.

How to Use an Echo Sounder/Fish Finder is \$49.95 and is available online at howtouseafishingfinder.com.

REEL TO REEL

A fine angle on fishing

MIKE ROENNFELDT

Vale Hal Harvey, a friendly and respected fellow enthusiast

LAST WEEK an exceptional man and a shining light in the West Australian fishing scene succumbed to pancreatic cancer after an amazing and prolonged battle.

I first met Hal Harvey when he came into my tackle shop in Watermans Bay back in the mid-1970s.

He was a teenager, there with a group of mates, young guys who lived and breathed fishing. Even then, I was struck by his quiet intelligence.

We didn't see a whole lot of each other outside of Outdoor Writers Association functions, annual tackle trade shows, and one or two fishing trips but I followed his life path with interest.

We were friendly competitors on a couple of fronts. We had tackle shops not far from each other and for years he wrote a fishing column for a rival newspaper, something that gave us a few laughs and moans when we each inadvertently ran the same story.

Hal wrote well. He knew his stuff and obviously did his homework, right up there on the cutting edge.

His success in business was self-evident. He obviously had great vision and the self-belief that allowed him to take the risks necessary to create a thriving enterprise.

The hallmark of Hal's Bluewater chain of fishing tackle shops was expertise.

He attracted and employed people who were nuts about fishing, people who could tell you from firsthand experience what to use and how to catch that salmon, yellowfin tuna or bonefish.

A good measure of a man in business is how he is regarded by his staff and I was always impressed by the way Hal's people related to him. They had enormous respect.

But outside of that they invariably spoke of him as a friend and hinted at a generosity of spirit that is all too rare in business. In short, they loved him.

His pride in wife Liza's achievements was obvious and he positively glowed earlier this year when I asked how he thought she was going with her demanding job as Police Minister.

Hal's love of life saw him cram

Hal Harvey doing what he loved best.

as much family adventure into his last couple of years as was humanly possible.

Hal was an accomplished angler, tackle expert, fine writer, and loving family man who will be missed by many.
